

Have you met the
revolutionary way of
sustainable yield
improvement?

INTRATECO SHIELD: CREATES A VITAL PLANT!

Intra Eco Shield ensures the formation of strong and healthy crops, with a better defence mechanism against abiotic stress and improved nutrient uptake. Intra Eco Shield is deposited in the outer cell wall of plants. This creates a natural shield, preventing mechanical damages. Intra Eco Shield can be dosed via the irrigation system or can be used as a foliar treatment. By applying the product on a weekly base you will have less production losses and more yield.

6 REASONS TO CHOOSE FOR INTRATECO SHIELD

- ✓ Greater resistance to harmful abiotic stress exposure
- ✓ Improves production results
- ✓ Provides a natural shield in plant cells
- ✓ Prevents production losses
- ✓ Easy-to-use with excellent absorption
- ✓ Unique blend with the highest level of plant-available silicon

Create a strong and more vital plant with an **ECO SHIELD** in the cell walls

Improve your production with up to **13% INCREASE** in total yield

Unique formula for an **EXCELLENT ABSORPTION** through the leaves and the roots

IMPROVED RESISTANCE WITH A NATURAL ELEMENT, PESTICIDE FREE

Intra Eco Shield strengthens your crop
for future proof growing
